A lifetime of human haematopoiesis with the generation of incalculable numbers of mature cells may rely on only a few thousand stem cells present at birth. We have stressed recent advances in technology in the laboratory and newer treatment strategies on the ward. The combination of general features of haemolysis and spherocytes in the blood is suggestive of hereditary spherocytosis but not diagnostic as spherocytes may also be seen in autoimmune haemolysis.

Isoimmune haemolytic anaemia Here alloantibodies isoantibodies cause haemolysis. Other relatively common aetiologies are drug hypersensitivity, malignancy, various skin diseases and connective tissue disorders. Plasma viscosity This test also measures the acute phase response indirectly, the result correlating with fibrinogen and immunoglobulin levels. WorldCat is the world's largest library catalog, helping you find library materials online.

Activating receptors bind to a variety of ligands on the target cell whereas present with the clinical and laboratory features of haemolysis discussed in the last section.
